

ILA-USMX JOINT SAFETY COMMITTEE

OSH Circular 2015-12 (25 November 2015)

DISTRACTED DRIVING KILLS!

As time passes, the evidence becomes clearer and clearer that electronic device use while operating a vehicle (whether it comes in the form of cell-phoning, texting, e-mail access, Bluetooth use, or any of the other potentially distractive forms of communication or entertainment) is a life-threatening proposition.

Within the waterfront's industrial environment, those hazards take on an even greater meaning and pose an even greater risk.

The most recent study undertaken by the Automobile Association of America (AAA) now points an accusatory finger at hands-free cell phone use.

Have a look for yourself:
